NEW SHAPES EXPAND OPTIONS WITHIN HOLOPHANE'S GLASWERKS® LED LUMINAIRE LINE *Prismatic bowl and tear drop optics offer efficiency, visual comfort and long-term performance*

GRANVILLE, OH (11/22/11) – Elegant and sustainable describe Holophane's new signature bowl and tear drop shaped glass refractors added to its GlasWerks® LED line of lighting fixtures. Designed for energy efficiency and reliable, long term performance, Euro-styled GlasWerks LED luminaires create contemporary appeal for a range of environments.

GlasWerks LED fixtures include multiple LED boards with symmetrical or asymmetrical distribution and a choice of wattage. Thermal management extends the fixtures' LED life and maximizes light output. The luminaires' mechanical design ensures user-friendly installation and time efficient maintenance.

"GlasWerks LED series luminaires combine modern LED technology with traditional prismatic glass optics for aesthetics and maximum performance," said Ben Prichard, Holophane Senior Products Manager, Outdoor. "The fixtures enhance visibility in a variety of applications, including city streets and boulevards, parks and historic districts, walkways, public squares, commercial developments, campuses and parking lots."

Luminaires within the GlasWerks LED line may be arm or pendant mounted and are offered with four additional cover styles: Bern, Hallbrook Extended, Vienna and Prague. Housing color options include black, green, white, bronze or custom.

Holophane GlasWerks LED luminaires are CSA listed as suitable for wet locations up to 40°C ambient temperature. The fixtures incorporate IP66 optics and IP55 housing.
